

## Dana 44™ AdvanTEK® Axles Take On Any Terrain

Each year, organized adventures across the country provide off-roaders the chance to tackle the most challenging trails and extreme obstacles – and they're an ideal opportunity for engineers at Dana to put the newest technologies to the test. This 2018 Jeep® Sahara demanded bigger tires, so we installed Dana 44™ AdvanTEK® JL Rubicon axles with a 4.88 gear ratio. Even though this vehicle wasn't heavily modified, the ring and pinion gearing upgrade to aftermarket ratios provided the power the Sahara needed to meet every challenge we could throw at it.

Over rocks and through streams, the Dana 44™ AdvanTEK® axles proved their outstanding refinement and durability. They are lightweight yet rugged, and offer best-in-class noise, vibration, and harshness (NVH) performance – all with greater power density. And while we're confirming the strength of AdvanTEK® axles, we also get to check out some great modifications like Walker Evans Racing wheels and a WARN® winch, because work can be fun, too!
