

# Spicer® Differential Locker Integration Kit for Rubicon: PN 10177304

## OE Switch Integration for Aftermarket Lockers

The Spicer Rubicon differential locker integration kit from Dana integrates an aftermarket locker into the vehicle harness in order to retain use of the factory locker switch in Jeep® JL/JLU (2018 – present) and JT (2020 – present) Rubicon vehicles.

The locker box is designed to be mounted under the vehicle near the axle with simple, plug-n-play installation. One kit will operate the locking differential of one axle. It can operate aftermarket electric locking differentials or solenoids for air-locking differentials. The locker box retains all factory logic for locker engagement, and it is sealed for protection from the elements.

## Installation Instructions

Connect the supplied pigtail to the locker (L) side of the box and connect to the aftermarket locker\*

Connect the vehicle harness into the vehicle (V) side of the box

One (1) 4-foot pigtail is provided

Ears on the housing allow for zip-tying to the vehicle

\*Connect directly to an electric locker or connect to the air solenoid for air-locking differentials
