

SPL350 Dura-Tune[®] Center Bearing Announcement

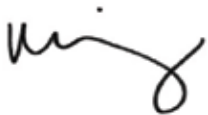

Date: **March 25, 2021**

To: **All Dana Aftermarket Group Spicer[®] Driveshaft Customers**

Dana Aftermarket Group is pleased to announce the expansion of our Spicer[®] Dura-Tune[®] self-aligning Center Bearing offering to now include SPL350. Engineered for durability and tuned to provide industry-leading powertrain vibration isolation and dampening for reduced driver fatigue and improved vehicle satisfaction, new Dura-Tune self-aligning center bearing part number 350CB04X will replace 350CB0001X.

- The new Dura-Tune center bearing addresses noise, vibration and harshness levels associated with the significantly higher drivetrain torque stresses and unique vibration frequencies with certain vehicles created by engine downspeeding and chassis lightweighting.
- Its patented design helps ensure proper installation and alignment throughout the life of the vehicle, delivering a more consistent ride while promoting drivetrain longevity. The new design also provides a more user-friendly installation, further reducing the possibility of future alignment-based issues.

The new Spicer Dura-Tune center bearing assembly 350CB04X is now available and will automatically supersede the 350CB0001X when supplies are exhausted. Pricing information for 350CB04X can be found on your DanaAftermarket.com account. Please contact your Dana representative for additional information. Thank you for your continued support of Spicer Aftermarket products!
