

## A Rolling Lab for OE Parts and New Technologies

When it's time to put new technologies to the test, engineers at Dana get out of the lab and let rubber hit the road—or better yet, the rocks. The Easter Jeep Safari in Moab, Utah presented the perfect opportunity to gather some real-world data on currently on-market and proposed technologies for vehicle modifications.

The technologies being tested on this Jeep® Wrangler JK included a new central tire inflation system (CTIS), which allows drivers to adjust pressure to optimal levels from inside the cab with just the push of a button. Even after the brutal challenges of Moab's rocks, sand, and steep inclines, the CTIS operated flawlessly, enhancing both ride and handling. It's all part of how Dana ensures that our designs live up to your extreme expectations.
